STATEMENT

MINERAL OILS

We hereby declare that ALASKA PLUS and ALASKA WHITE type folding box boards are produced exclusively from virgin fibres, without any addition of recycled fibres. We also confirm that no material, containing mineral oils, is intentionally used as a raw material in ALASKA PLUS and ALASKA production process. Tests performed in independent, accredited laboratory confirm that the amount of mineral oil components (MOHS and MOAH) in our boards is below the limits conventionally established as fully safe(*) : 24 mg/kg of MOSH+POSH (C₁₀-C₃₅) and 6 mg/kg of MOAH (C₁₀-C₃₅).

(*) *Valid limits of MOSH and MOAH content in packaging materials are not legally established yet in EU. The limit values indicated above were proposed in 2013 by BMELV (German Federal Ministry of Food , Agriculture and Consumer Protection) as "fully safe", releasing packaging from any specific migration tests.*

SENSORY STATEMENT

TASTE TAIN

ALASKA WHITE and ALASKA PLUS folding box board grades, produced by MM Kwidzyn sp. z o.o. are regularly tested according to EN 1230-2 *Paper and Board – sensory analysis – Part 2 Off flavor (taint)*. In our regular tests we use both: samples from fresh production and samples taken from warehouse, stored in original package several months (up to one year). In the test, the impact on chocolate taste is assessed by trained panel.

Based on our present and historical assessment data, we confirm that for not printed and not converted ALASKA WHITE and ALASKA PLUS board, the results of Robinson taste tests achieved for both: "fresh" produced and one year warehoused product kept at standard storage conditions in original packaging not exceed 1.0.
