

TexPrint[®]UT

UTILITY TEXTILE GRADE

Digital dye-sublimation print paper

FEATURES:

Largest selection of basis weights, widths to 3.2m and roll lengths to mini-jumbo.

Flatness

Fast ink absorption

Highest dye-gas output

Faster transfers

Backside binder

Waste reduction

An easy-to-work-with paper, featuring economical ink usage, highest color yields and powerful economics in cost conscious, high-volume textile printing environments. Not designed to transfer to hard, smooth or non-porous substrates.

CUSTOMER BENEFITS:

Get exactly the right put-up for your print environment with less waste, fewer roll changes and more up-time.

TexPrint[®]UT lays flat. Prints flat. Resists cockling even under heavy ink loads. No head strikes, no worries.

Easily keeps pace with the fastest commercial textile printers without offsetting.

More color on your fabric, less ink left on your print sheet.

UT allows heat to migrate through the print sheet quicker, allowing lower calendar dwell times and faster transfer speeds, while depositing the richest and deepest dye-gas penetration.

A specially developed binder applied to the non-print side of TexPrint[®]UT to control fiber-contamination of sticky-belt platens on high-speed digital textile printers.*

Available in individually boxed or palletized packaging. Volume users can save time and labor by ordering bulk packaging.
